

# Sightseeing

---

## Project Summary

---

Team -11

### 1.1 Project Overview

Elysian is a sightseeing website that gives you details of rare, ancient and ethereal places around the country that are usually overlooked by the tourists. This website allows user to learn details and locations of unexplored treasures of Indian heritage with ease. This web-based app will help the world see and learn the details of unmapped jewels in India.

### 1.2 Project Scope

Elysian acts as a safe and accurate platform to learn and know the details and locations of sightseeing places to visit in India. You are led to a map of India, when, clicked on the part of India it leads you to the places to visit and explore in that part of the country. This is a very user-friendly website as it is very convenient to navigate through. It's a website open for any wanderlust who is ready to explore the ethereal beauty of India.

### Project Description

**Navigation bar:** It consists of developer information (Personal website), North, South, East, West and login/sign up headings with a logo on the top left corner on the webpage.

**About:** On the top of home page lies the information about the website and introduction elysian.

**Map:** After the about section lies the Map. This map is divided into 4 sections north, south, east and west. When clicked on a particular part of the map, depending on the part clicked on, the website takes you to the webpage concerning that part of the map.

**Insights:** This consists of a deeper glance through the places mentioned and concepts behind the tourist places. It also consists of FAQ's/comment section which allows registered users to add their comments and guest user to look through it.

**Footer:** The footer consists of social media links like Github, linkedIn, Twitter, Instagram references, privacy policy with logo completing the footer part.
